09:30-10:20

Urgências Ortopédicas: Truques e perigos / Luís Lamas

Urgências ortopédicas podem ser definidas como todas as condições que levam um cavalo a ter relutância em apoiar um membro bem como todas as condições cuja evolução poderá ter o mesmo fim. A lista exaustiva destas condições é vasta mas pode ser simplificada em quatro tipos de afeções: Fraturas/luxações, Abscessos, processos Sépticos, Tenditis/desmites (FAST).

10:25-11:15

Remover ou não remover: O que fazer com chips, inchaços e gónadas / Luís Lamas

Muitos dos procedimentos cirúrgicos baseiam-se num simples objetivo: remover tecido ou corpos estranhos que estejam a causar patologia. Embora esta decisão possa ser simples em muitos casos, há uma variedade de condições em que a evidência clínica não consegue definir qual a decisão com melhor prognóstico: remover ou não remover. Por isso a decisão muitas vezes baseia-se na experiência do cirurgião, fatores cosméticos e/ou comerciais.

11:45-12:35

Management of fractured Incisor teeth in Horses / Peter Fahrenkrug

Fluid therapy in the 21st Century: The aims of this talk are to: address decision making regarding the need for intravenous fluids; discuss the value of aggressive intravenous plans with case examples; discuss types of enteral fluids appropriate in different disease processes; discuss the use of fluids per rectum. All aims will be supported by case examples that will ensure this session is relevant to your veterinary practice.

12:40-13:30

Practical approach to the sick neonate / Gayle Hallowell

Using clinical pathology in the sick horse: The aims of this talk are to: discuss various aspects of clinical pathology that are and are not valuable to a variety of conditions that are identified in the adult horse and neonate in order to optimise the use of finances available. These will be illustrated with clinical examples.

15:00-15:50

Fluid therapy in the 21st century / Gayle Hallowell

Fluid therapy in the 21st Century: The aims of this talk are to: address decision making regarding the need for intravenous fluids; discuss the value of aggressive intravenous plans with case examples; discuss types of enteral fluids appropriate in different disease processes; discuss the use of fluids per rectum. All aims will be supported by case examples that will ensure this session is relevant to your veterinary practice.

15:55-16:45

Using Clinical pathology to assess the sick horse / Gayle Hallowell

Using clinical pathology in the sick horse: The aims of this talk are to: discuss various aspects of clinical pathology that are and are not valuable to a variety of conditions that are identified in the adult horse and neonate in order to optimise the use of finances available. These will be illustrated with clinical examples.

17:35-18:25

Cardiovascular emergencies in foals and adults / Gayle Hallowell

Cardiovascular emergencies in foals and adults: The aims of this talk are to: evaluate initial approach and management of cardiac arrest in the neonate; initial approach and management of the horse that has presented with colic which has cardiac disease; initial approach and management of vascular emergencies - thrombi and bleeds. All aims will be supported by case examples that will ensure this session is relevant to your veterinary practice.
